

White Cream

Anti-ACNE CREAM

After years of research with specialized scientists, we developed a new, innovative, anti-acneic product:

WhiteCream

Knowing the demands of the treatment, we wouldn't create a product that fights directly the acne, if it was not innovative and better from the already existing ones.

WhiteCream contains:

NIACINAMIDE PC 4%:

Comparative data and Clinical studies are proving its superiority compared to Clindamycin:

- 82% vs 68% of Clindamycin in acne damages.
- 60% vs 43% in inflammatory acne.
- Serious moderation of the inflammatory hyperpigmentation (it stops the immigration of melanosomes)

Our planning and goal was the simplification of the treatment and the global confrontation of acne

DERMAPURE HP 4%:

- Offers Cutaneous Homeostasis and stimulation of Cathelicidin production.
- Inhibits St. Aureus by 82% and Prop. Acnes by 92%.
- Also reduces: The inflammatory damages
The penetration of the damage
Microvesicles by 43%
The lipids' indicator
- Improves pores by 21% and reduces black spots.

In order to make the action of those 2 active ingredients faster and better, we needed the best vehicle that ensures their penetration. This is the herbal alcohol **BISABOLOL.**

The other ingredients of **White**Cream are quite familiar and incomparable such as:

Salicylic Acid 2% - ALLANTOINE - PANTHENOL - Vit. E

WhiteCream offers an innovative treatment of Acne. The first feedback from its application with **MEDIMAR LOTION**, is extremely rewarding.

Respecting the surrounding economic situation, we present **White**Cream with dosimetric dispenser for economical use and safety of the product.

PACKAGING: Plastic bottle with dosimetric dispenser

WAY OF USE: 2 times daily after cleaning face with **MEDIMAR LOTION.**
